

WavesAI Academy

Practical Video Recording Scripts

Complete Step-by-Step Guide for All 52 Lessons

8 Modules | 52 Lessons | ~10 Hours of Content

Prepared for WavesAI Academy Course Recording

Recording Setup & Tips

1. Use OBS Studio (free) or Loom for screen recording. Record at 1920x1080 resolution.
2. Use a good USB microphone (Blue Yeti, Rode NT-USB, or similar). Or use ElevenLabs to generate voiceover from these scripts.
3. Position your face in a small circle overlay in the bottom-right corner of the screen.
4. Before each lesson, open all tabs and tools you'll need so there are no loading delays.
5. Zoom into the area you're clicking so students can follow along easily.
6. Pause and explain before each click - don't rush through actions.
7. Record in short sections (5-10 minutes each) so editing is easier.
8. Always do a 30-second test recording before starting each lesson to check audio levels.
9. Save raw footage immediately after recording. Name files clearly: M1-L1-raw.mp4, M1-L2-raw.mp4, etc.
10. Add chapter timestamps when uploading so students can jump to specific sections.

Priority Recording Order

Record in order: Module 1 first, then work forward. Modules 3, 4, and 7 have the biggest practical demos and will take the longest. Budget extra time for those.

Estimated Time

Module	Lessons	Est. Recording Time
Module 1: AI Foundations	7	45-65 minutes
Module 2: Content Creation	7	55-75 minutes
Module 3: Voice & Video AI	7	65-90 minutes
Module 4: No-Code Automation	7	55-80 minutes
Module 5: AI SEO & Marketing	6	50-70 minutes
Module 6: AI Sales & Revenue	7	55-75 minutes
Module 7: Building Your Business	6	65-90 minutes
Module 8: Ethics, Legal & Launch	7	40-60 minutes
TOTAL	52	7-10 hours

Module 1: AI Foundations & Getting Started

Lesson 35: Introduction to AI & What It Means for You

Duration: 5-8 minutes

What to show on screen:

- ChatGPT, Claude, and Google Gemini open side by side in browser tabs
- A simple business prompt typed into all three, comparing results
- Real examples of AI-powered businesses (screenshots of companies using AI)

Step-by-step recording guide:

1. Open your browser with 3 tabs: ChatGPT (chat.openai.com), Claude (claude.ai), and Gemini (gemini.google.com)
2. Type the same prompt into all 3: "Write a professional email to a client apologising for a shipping delay and offering 10% off their next order"
3. Show each result side by side - highlight the differences in tone and style
4. Switch to a new prompt: "Give me 5 social media post ideas for a coffee shop in London" - show how each AI approaches this differently
5. Open a Google Doc and paste the best result, showing how easy it is to use AI output in real work
6. Briefly show the ChatGPT home screen and explain free vs paid tiers

What to say (suggested script):

Welcome to Lesson 1! Today I'm going to show you exactly what AI can do for your business.

I've got three of the biggest AI tools open right now - ChatGPT, Claude, and Gemini.

Let me type the exact same prompt into all three so you can see how they compare...

Notice how ChatGPT gives us a more formal tone, while Claude is slightly more conversational.

The key takeaway here is that AI is not one-size-fits-all. Different tools have different strengths.

By the end of this course, you'll know exactly which tool to use for every situation.

PRO TIP: Keep this lesson high-energy and exciting - it's the first impression of the course

Lesson 36: AI Tools Landscape

Duration: 8-10 minutes

What to show on screen:

- Each tool's website/dashboard briefly
- Pricing pages for key tools
- A comparison table or spreadsheet showing all tools by category

Step-by-step recording guide:

1. Open a Google Sheet or Notion page with a pre-made comparison table: columns = Tool Name, Category, Free Tier, Paid Price, Best For

2. Text AI: Open ChatGPT dashboard, show the interface. Then open Claude, show the interface. Briefly mention pricing.
3. Image AI: Open Leonardo AI (app.leonardo.ai), show the generation screen. Briefly show Midjourney website.
4. Video AI: Open HeyGen (app.heygen.com), show the avatar selection screen. Open D-ID briefly.
5. Voice AI: Open ElevenLabs (elevenlabs.io), show the voice generation page and play a sample.
6. Automation: Open Make.com dashboard, show the scenario builder. Open Zapier briefly.
7. Return to your comparison table and summarise which tools students will use in this course

What to say (suggested script):

Now let me walk you through all the AI tools we'll be using throughout this course. Don't worry about signing up for everything right now - in the next lesson I'll walk you through setup step by step.
For now, just watch and get familiar with what each tool looks like and what it does.

PRO TIP: Don't spend more than 60-90 seconds on each tool - keep it moving

PRO TIP: Have all tabs pre-opened before recording to avoid loading delays

Lesson 37: Setting Up Your AI Toolkit

Duration: 10-12 minutes

What to show on screen:

- Sign-up process for each tool (ChatGPT, Leonardo AI, ElevenLabs, Make.com)
- Where to find API keys in each dashboard
- A password manager or secure notes app for storing credentials

Step-by-step recording guide:

1. Start at chat.openai.com - click Sign Up, walk through the email/Google sign-in process
2. Once logged in, show the main ChatGPT interface. Click on your profile > Settings to show account details.
3. Open Leonardo AI (app.leonardo.ai) - sign up with Google. Show the dashboard, point out the free credits counter.
4. Open ElevenLabs (elevenlabs.io) - sign up. Show the dashboard, play a quick voice sample to confirm it works.
5. Open Make.com - sign up for free account. Show the empty dashboard where scenarios will be built.
6. Open your browser's password manager or a notes app - show students how to save their login details securely
7. Go to platform.openai.com > API Keys > Create new key. Show where to copy it. Explain: "Keep this secret, never share it publicly."
8. Show Leonardo AI API key location: Settings > API Access

What to say (suggested script):

Alright, let's get you set up! I'm going to walk through signing up for each tool one by one.

Pause the video if you need more time on any step - there's no rush.

All of these have free tiers, so you won't need to pay anything to follow along.

PRO TIP: Use a fresh browser or incognito window so the sign-up flow looks clean

PRO TIP: Blur or cover any personal details that appear during sign-up

Lesson 38: Your First AI Outputs

Duration: 8-10 minutes

What to show on screen:

- ChatGPT with a bad prompt vs a good prompt side by side
- Three different business outputs: email, social post, product description
- Copy-pasting results into Google Docs

Step-by-step recording guide:

1. Open ChatGPT. Type a BAD prompt: "Write something about marketing." Show the vague, unhelpful result.
2. Now type a GOOD prompt: "Write a 150-word Instagram caption for a London-based yoga studio promoting their new beginner class. Tone: warm, inviting. Include a call to action and 5 relevant hashtags."
3. Show the dramatically better result. Highlight what made the prompt better: specificity, tone, length, format.
4. New chat - Business email: "Write a professional follow-up email to a potential client who attended our webinar but hasn't booked a call yet. Keep it under 100 words."
5. New chat - Product description: "Write a product description for a handmade soy candle. Scent: lavender and vanilla. Target audience: women aged 25-40. Include 3 bullet points of key features."
6. Copy each output into a Google Doc. Show formatting, editing, making it your own.
7. Teach the formula: Role + Task + Context + Format + Tone = Perfect Prompt

What to say (suggested script):

This is where it gets fun. Let me show you the difference between a bad prompt and a great one.

Watch this... I'm going to type something vague and see what we get... See? Not very useful.

Now watch what happens when I give AI specific instructions...

That's the magic of prompting. The better your instructions, the better the output.

PRO TIP: This is a crucial lesson - students need to feel the 'aha moment' of good prompting

Lesson 39: AI for Everyday Productivity

Duration: 8-10 minutes

What to show on screen:

- AI summarising a long article
- AI creating meeting notes from bullet points
- AI drafting email replies
- AI building a weekly schedule

Step-by-step recording guide:

1. Copy a long news article (500+ words) from BBC or similar. Paste into ChatGPT: "Summarise this article in 3 bullet points for a busy executive."
2. Show the summary. Then ask: "Now give me 5 key takeaways and one action item."
3. Meeting notes: Type messy bullet points like: "- talked about Q3 targets, - sarah said budget is tight, - need to hire 2 more people, - deadline is sept 15". Ask AI: "Turn these rough notes into professional meeting minutes with action items and owners."
4. Email reply: Paste a sample customer complaint email. Ask AI: "Write a professional, empathetic reply that offers a solution."
5. Weekly schedule: "Create a weekly schedule for a freelance AI consultant. Include client work, marketing, admin, and learning time. Format as a table."
6. Show how fast each task was - compare to doing it manually

What to say (suggested script):

*These are the everyday uses that will save you hours every single week.
I use AI for tasks like these every day in my own business, and I want to show you exactly how.*

Lesson 40: Understanding AI Ethics & Limitations

Duration: 5-8 minutes

What to show on screen:

- An AI hallucination example
- A fact-checking workflow
- AI bias demonstration

Step-by-step recording guide:

1. Ask ChatGPT a trick question: "Who won the Olympic gold medal in underwater basket weaving in 2024?" Show it confidently making something up.
2. Explain: "This is called a hallucination. The AI doesn't know it's wrong - it generates plausible-sounding text regardless."
3. Show fact-checking: Take an AI output with statistics. Google-verify 2-3 claims. Show one that's wrong.
4. Bias example: Ask "Describe a CEO" then ask "Describe a nurse" - show how stereotypes can appear.
5. Then show how to fix it: "Describe a CEO who is a 35-year-old woman from Lagos, Nigeria" - show AI adapting.
6. Show a checklist on screen: Always fact-check, Disclose AI use, Don't copy-paste without editing, Respect copyright

What to say (suggested script):

*Before we go further, we need to talk about the limitations of AI.
AI is incredibly powerful, but it's not perfect. Let me show you what can go wrong...*

PRO TIP: Keep this balanced - don't scare students, but make sure they understand the responsibility

Lesson 41: Module 1 Quiz & Reflection

Duration: 3-5 minutes

What to show on screen:

- The quiz interface on the academy
- Sample questions and how to answer them
- A reflection template

Step-by-step recording guide:

1. Open the academy and navigate to the Module 1 quiz page
2. Show the quiz format: multiple choice, 5 questions, need 80% to pass
3. Walk through 2 sample questions without giving away answers
4. Show the reflection exercise: a simple template asking "What was your biggest takeaway?" and "Which AI tool are you most excited to use?"
5. Encourage students to share their reflections in the community

What to say (suggested script):

Time for your first quiz! Don't stress - if you've followed along with the lessons, you'll do great.

You need 80% to pass, and you can retake it if needed.

Module 2: AI Content Creation

Lesson 28: Introduction to AI Content Creation

Duration: 5-8 minutes

What to show on screen:

- Before/after comparison: manually written content vs AI-assisted
- The content creation workflow: idea > outline > draft > edit

Step-by-step recording guide:

1. Show a blank Google Doc labelled "Manual Process" - start writing a blog intro by hand, show how slow it is (type for 30 seconds)
2. Open ChatGPT in a new tab. Give it the same topic with clear instructions. Show the result appearing in seconds.
3. Put both side by side - highlight that AI gives you a strong first draft, but you still edit and personalise
4. Draw the workflow on screen (use a simple diagram tool or just type it out): Idea > Research > Outline > AI Draft > Human Edit > Publish
5. Show 3 types of content AI can create: blog posts, social media, emails - quick 10-second example of each

What to say (suggested script):

Content creation used to take hours. With AI, you can produce professional content in minutes.

But here's the key - AI is your assistant, not your replacement. You still bring the strategy, the voice, and the final polish.

Lesson 29: Writing with AI: Blog Posts & Articles

Duration: 12-15 minutes

What to show on screen:

- Full blog post creation from scratch in ChatGPT
- Outline generation, section expansion, editing
- Pasting into WordPress or Google Docs

Step-by-step recording guide:

1. Open ChatGPT. Start with: "I need a 1,500-word blog post about '5 Ways Small Businesses Can Use AI to Save Time'. Target audience: small business owners with no tech background. Tone: friendly, practical, actionable."
2. First ask for just an outline: "Before writing, give me an outline with H2 headings and brief descriptions of each section."
3. Review the outline on screen. Make one change: "Swap section 3 and 4, and add a section about AI email tools."
4. Now ask it to write the full post based on the updated outline
5. Show the result. Highlight: intro hook, subheadings, bullet points, call to action at the end
6. Copy the content into WordPress (or Google Docs). Show basic formatting: add headings, bold key phrases, add a featured image placeholder

7. Show how to edit AI writing to add your personal voice: change a sentence to include a personal anecdote
8. Add meta title and meta description using AI: "Write an SEO meta title (under 60 chars) and meta description (under 155 chars) for this blog post"

What to say (suggested script):

Now I'm going to show you how to write a complete blog post using AI, from start to finish.

The key is to start with an outline - never just say 'write me a blog post'. Guide the AI step by step.

PRO TIP: This is one of the most practical lessons - go slowly so students can follow along

Lesson 30: AI for Social Media Content

Duration: 10-12 minutes

What to show on screen:

- Creating posts for Instagram, LinkedIn, and Twitter/X
- Repurposing one blog post into multiple social posts
- A content calendar template

Step-by-step recording guide:

1. Open ChatGPT. Start with Instagram: "Write an Instagram caption for a fitness coach promoting a 6-week transformation programme. Include emoji, a hook, 3 benefits, a CTA, and 10 hashtags. Max 200 words."
2. Show the result. Explain what makes it good: hook in first line, benefits, clear CTA, relevant hashtags.
3. LinkedIn post: "Write a LinkedIn thought leadership post about why small businesses should adopt AI in 2026. Professional tone, personal storytelling format, include a question to drive engagement. 200-300 words."
4. Twitter/X thread: "Turn this LinkedIn post into a 5-tweet Twitter thread. Each tweet under 280 characters. Start with a hook. End with a CTA."
5. Show repurposing: Take the blog post from the previous lesson. Ask: "Turn this blog post into: 1 Instagram caption, 1 LinkedIn post, and 1 Twitter thread."
6. Open Google Sheets. Create a simple content calendar: Date | Platform | Content Type | Topic | Status
7. Ask AI: "Give me a 7-day content calendar for an AI consulting business. Platforms: Instagram, LinkedIn, Twitter. Mix of educational, promotional, and engagement posts."

What to say (suggested script):

One piece of content can become 10 different posts across platforms. Let me show you how.

PRO TIP: Show real platform interfaces if possible - even just the posting screen

Lesson 31: AI Image Generation for Business

Duration: 10-12 minutes

What to show on screen:

- Leonardo AI dashboard and generation process
- Different styles: photorealistic, illustrated, minimal
- Downloading and resizing images

Step-by-step recording guide:

1. Open Leonardo AI (app.leonardo.ai). Show the dashboard and credit counter.
2. Generate a product mockup: Click 'Generate', enter prompt: "Professional product photo of a luxury scented candle on a marble surface, soft natural lighting, minimalist style, 4K"
3. Show the results loading. Pick the best one. Show how to download.
4. Generate a social media graphic: "Modern Instagram post design for a tech startup, featuring abstract geometric shapes, teal and white colour scheme, clean and professional"
5. Generate a logo concept: "Minimalist logo design for an AI consulting company called WavesTech, incorporating a wave and circuit board elements, navy blue and gold colours"
6. Show style comparison: Generate the same concept in 3 styles - photorealistic, flat illustration, and watercolour
7. Show how to download in different sizes. Explain: use 1080x1080 for Instagram, 1200x628 for blog/Facebook, 1080x1920 for Stories/Reels.
8. Show the negative prompt feature: "Avoid: text, watermarks, blurry, low quality"

What to say (suggested script):

No more paying hundreds for stock photos or graphic designers for every little thing. Leonardo AI lets you create professional images in seconds. Let me show you.

PRO TIP: Generate images before recording so you have good examples ready in case the live generation takes too long

Lesson 32: AI Video & Audio Content

Duration: 10-12 minutes

What to show on screen:

- HeyGen avatar video creation
- ElevenLabs voiceover generation
- Combining in a free editor

Step-by-step recording guide:

1. Open HeyGen (app.heygen.com). Click 'Create Video'.
2. Select an avatar (e.g., Brandon or another professional one). Choose a background.
3. Type a short script (3-4 sentences): "Welcome to our AI consulting services. We help businesses save time and increase revenue using cutting-edge AI tools. Book a free discovery call today."
4. Select a voice. Click Generate. Show the processing/waiting screen.
5. While waiting, switch to ElevenLabs (elevenlabs.io). Go to Text to Speech.
6. Paste a voiceover script: "Introducing WavesTech - your partner in AI transformation. Our team of experts will build custom AI solutions for your business."
7. Select a professional voice. Click Generate. Play the result.
8. Download the audio file. Show file format (MP3) and where it saves.

9. Show the HeyGen video result (should be done by now). Download it.
10. Open CapCut (free editor) or any editor. Show how to combine avatar video + voiceover audio if needed.
11. Export the final video at 1080p

What to say (suggested script):

AI video and audio are game-changers for your business.

You can create professional videos and voiceovers without a camera, studio, or expensive equipment.

PRO TIP: Have a backup pre-generated video ready in case HeyGen takes too long during recording

Lesson 33: Building a Content Strategy with AI

Duration: 8-10 minutes

What to show on screen:

- AI creating a 30-day content calendar
- Content pillars generation
- Repurposing workflow diagram

Step-by-step recording guide:

1. Open ChatGPT. Ask: "I run an AI consulting business targeting small businesses in the UK. Create 5 content pillars for my social media strategy with a brief description of each."
2. Show the pillars. Explain what they are: categories your content rotates through.
3. Now create the calendar: "Using these 5 pillars, create a 30-day content calendar with specific post ideas. Format as a table with columns: Day, Platform, Pillar, Content Type, Topic/Hook."
4. Show the table result. Copy it into Google Sheets.
5. Ask: "Now show me a content repurposing workflow: how to turn 1 blog post into 10 pieces of content across platforms."
6. Show the workflow. Walk through each step: Blog > LinkedIn article > Tweet thread > Instagram carousel > Reel script > Email newsletter > etc.
7. Show a final overview: with AI + this strategy, you can create a month of content in one afternoon

What to say (suggested script):

Strategy without AI is slow. AI without strategy is chaos. Together, they're unstoppable.

Let me show you how to plan a full month of content in about 30 minutes.

Lesson 34: Module 2 Quiz & Content Portfolio

Duration: 3-5 minutes

What to show on screen:

- Quiz interface
- Sample portfolio folder structure

Step-by-step recording guide:

1. Open the academy quiz page. Walk through the format.
2. Show a sample portfolio: a Google Drive folder with subfolders: Blog Posts, Social Media, Images, Videos
3. Show 1-2 example files in each folder from what students should have created
4. Explain the portfolio exercise: gather all content you created in this module into one folder
5. Encourage students to share their best piece in the community

What to say (suggested script):

By now you should have created several pieces of content. Let's organise them into a portfolio you can show clients.

Module 3: Voice & Video AI

Lesson 42: Introduction to Voice & Video AI

Duration: 5-8 minutes

What to show on screen:

- Quick montage of AI voice/video examples
- Real business use cases

Step-by-step recording guide:

1. Show a quick demo reel: play a HeyGen avatar video, an ElevenLabs voiceover, and a Vapi voice agent recording
2. Show 3 real business use cases: (1) A company using AI avatars for training videos, (2) A podcast using AI voiceovers, (3) A business using AI voice agents for customer calls
3. Open each platform's website briefly: HeyGen, ElevenLabs, Vapi, D-ID
4. Show a comparison: cost of hiring a video production team vs using AI tools
5. Preview what students will build in this module: a voice agent and a video project

What to say (suggested script):

Voice and video AI are the most exciting developments in the AI space right now. By the end of this module, you'll be able to create professional videos and build voice agents that handle real phone calls.

Lesson 43: Building AI Voice Agents with Vapi

Duration: 15-20 minutes

What to show on screen:

- Vapi dashboard and agent creation
- Setting up greeting, personality, knowledge base
- Making a test call

Step-by-step recording guide:

1. Open Vapi (vapi.ai). Log in and show the dashboard.
2. Click 'Create Assistant' or 'New Agent'. Name it: "WavesTech Customer Support Agent"
3. Set the greeting message: "Hello! Thank you for calling WavesTech. How can I help you today?"
4. Configure the personality/system prompt: "You are a friendly, professional customer support agent for WavesTech, an AI consulting company. You can answer questions about our services, pricing, and booking consultations. Be concise and helpful."
5. Add knowledge base content: paste in your company info, services list, pricing, FAQs
6. Set the voice: choose a professional, natural-sounding voice
7. Configure the phone number (if using one) or use the web widget
8. Make a test call. Ask: "What services do you offer?" and "How much does it cost?"
9. Show the call logs and transcript after the call
10. Show analytics: call duration, topics discussed, resolution rate

11. Demonstrate advanced features: call transfer to human, appointment booking

What to say (suggested script):

Now we're building something really powerful - an AI voice agent that can answer phone calls 24/7.

Imagine never missing a customer call again, even at 3am. That's what we're creating.

PRO TIP: Practice the test call beforehand so you know what questions work well

PRO TIP: Have backup questions ready in case the AI gives an unexpected answer

Lesson 44: Professional Voiceovers with ElevenLabs

Duration: 10-12 minutes

What to show on screen:

- ElevenLabs Text to Speech
- Voice cloning feature
- Downloading audio and adding to video

Step-by-step recording guide:

1. Open ElevenLabs. Navigate to Text to Speech.
2. Type a professional script: "At WavesTech, we believe every business deserves the power of AI. Our mission is to make artificial intelligence accessible, affordable, and effective for businesses of all sizes."
3. Show the voice library. Select 3 different voices and generate each one. Play back and compare.
4. Choose the best voice. Adjust settings: Stability slider, Clarity slider. Explain what each does.
5. Show Voice Cloning: Go to Voices > Add Voice > Instant Voice Clone
6. Upload a sample recording (or explain what's needed: 1-3 minutes of clean speech)
7. Generate text with the cloned voice. Play the result.
8. Download the MP3 file. Show file size and quality settings.
9. Open CapCut or a free video editor. Import a stock video or slideshow. Add the voiceover track.
10. Sync the audio with visuals. Export at 1080p.

What to say (suggested script):

ElevenLabs creates voiceovers so realistic, most people can't tell the difference from a human recording.

You can even clone your own voice and have AI speak in your voice across dozens of languages.

Lesson 45: AI Video Avatars: HeyGen & D-ID

Duration: 12-15 minutes

What to show on screen:

- HeyGen full video creation
- D-ID talking head from photo

- Side-by-side comparison

Step-by-step recording guide:

1. Open HeyGen. Click 'Create Video' > 'Avatar Video'.
2. Browse avatars. Pick a professional one. Choose a studio background.
3. Write a 30-second script for a product demo or company intro
4. Select the voice. Show language options (50+ languages).
5. Click Generate. While waiting, switch to D-ID.
6. Open D-ID (studio.d-id.com). Click 'Create Video'.
7. Upload a professional headshot photo. Paste a script. Select a voice.
8. Generate the D-ID video.
9. Show both results side by side. Compare: lip sync accuracy, natural movement, video quality
10. Discuss when to use each: HeyGen for professional studio-quality videos, D-ID for quick talking-head content from any photo
11. Show HeyGen's premium features: custom avatars, screen recording with avatar overlay

What to say (suggested script):

Two of the most powerful AI video tools on the market. Let me show you how each one works and when to use which.

PRO TIP: Have pre-generated videos as backup in case generation takes too long during recording

Lesson 46: Short-Form Content Factory

Duration: 10-12 minutes

What to show on screen:

- Converting one long script into multiple short videos
- Adding captions with CapCut
- Batch production workflow

Step-by-step recording guide:

1. Start with a long script (2 minutes of content). Paste into ChatGPT: "Break this script into 3 separate 20-second scripts for TikTok/Reels. Each should stand alone with a hook, value, and CTA."
2. Show the 3 short scripts. Pick one.
3. Open HeyGen. Generate a short avatar video with the first script.
4. Download the video. Open CapCut (free version).
5. Import the video. Show how to add auto-captions: go to Text > Auto Captions > Generate.
6. Customise caption style: font, colour, animation. Show trendy styles.
7. Add background music from CapCut's library. Set volume low.
8. Export in 9:16 ratio (vertical) for TikTok/Reels/Shorts.
9. Show the batch workflow: script all 3 videos > generate all 3 in HeyGen > edit all 3 in CapCut > schedule all 3
10. Explain: this workflow produces 15-20 short videos per week with minimal effort

What to say (suggested script):

Short-form content is king right now. TikTok, Reels, Shorts - they all want short, punchy videos.

Let me show you how to produce them at scale using AI.

Lesson 47: Build a Customer Service AI Agent

Duration: 15-20 minutes

What to show on screen:

- Building a complete chatbot or voice agent
- Adding FAQs and knowledge base
- Testing with real questions

Step-by-step recording guide:

1. Open Vapi or your chosen chatbot platform (Tidio, Intercom, or similar)
2. Create a new customer service agent for a sample business (e.g., an e-commerce store)
3. Set up the system prompt with detailed instructions about the business, products, return policy, shipping info
4. Add a comprehensive FAQ knowledge base: 10-15 common questions with detailed answers
5. Configure escalation rules: when should the AI transfer to a human? (e.g., refund requests over a certain amount, complaints, technical issues)
6. Test with 5 different customer scenarios: product inquiry, order status, return request, complaint, general question
7. Show how the agent handles each one. Point out where it does well and where it might need adjustment.
8. Show how to embed the agent on a website (copy-paste code snippet)
9. Show the analytics dashboard: number of conversations, resolution rate, average handling time

What to say (suggested script):

Now let's build something you can actually sell to clients - a customer service AI agent.

This is one of the highest-demand AI services right now.

PRO TIP: This is a major practical project - go slow and explain each decision

Lesson 48: Module 3 Quiz & Video Project

Duration: 3-5 minutes

What to show on screen:

- Quiz walkthrough
- Sample completed video project

Step-by-step recording guide:

1. Open the quiz. Walk through the format.

2. Show a sample completed video project: a 60-second business intro video with avatar, voiceover, and captions
3. Explain the exercise: create a 30-60 second video using any combination of tools from this module
4. Show the submission process

What to say (suggested script):

Time to put your skills to the test! Create a short video that showcases what you've learned.

Module 4: No-Code Automation

Lesson 49: Introduction to No-Code Automation

Duration: 5-8 minutes

What to show on screen:

- Make.com and Zapier dashboards
- Trigger > Action concept with visual diagram

Step-by-step recording guide:

1. Open Make.com. Show the clean dashboard with scenarios.
2. Open Zapier in another tab. Show the Zap editor.
3. Draw or display a simple diagram: TRIGGER (something happens) > ACTION (something is done automatically)
4. Give 3 real examples: (1) New email > save attachment to Drive, (2) New form submission > send personalised email, (3) New social mention > notify on Slack
5. Show Make.com's drag-and-drop interface briefly. Explain modules and connections.
6. Compare Make vs Zapier: Make = more visual and powerful, Zapier = simpler for beginners. We'll focus on Make.

What to say (suggested script):

Automation is where AI becomes truly powerful. Instead of doing repetitive tasks manually, you build it once and it runs forever.

No coding required - everything is drag and drop.

Lesson 50: AI Workflows with Make & Zapier

Duration: 15-20 minutes

What to show on screen:

- Building a complete workflow in Make.com from scratch
- Connecting form > ChatGPT > email > Google Sheet

Step-by-step recording guide:

1. Open Make.com. Click 'Create a new scenario'.
2. Add the first module: Google Forms or Typeform (Trigger: new form submission)
3. Connect your Google account. Select a test form (create a simple one beforehand: Name, Email, Question).
4. Add the second module: OpenAI (ChatGPT). Configure: model = GPT-4, prompt = 'Based on this form submission, write a personalised response: {{name}} asked: {{question}}'
5. Add the third module: Gmail or SMTP. Send the AI-generated response to the form submitter's email.
6. Add the fourth module: Google Sheets. Log the submission and AI response in a spreadsheet.
7. Connect all modules with the flow arrows. Map the data fields between each step.
8. Click 'Run once' to test. Submit a test form entry and watch it flow through all 4 steps.
9. Show the execution log. Verify the email was sent and the sheet was updated.

10. Show scheduling: set it to run every 15 minutes or instantly on trigger

What to say (suggested script):

This is the workflow that changed my business. Let me build it from scratch right in front of you.

Once this is set up, it runs 24/7 without you touching it.

PRO TIP: Have a test form ready before recording. Submit a test entry while recording to show real-time execution.

Lesson 51: AI Chatbots & Business Assistants

Duration: 12-15 minutes

What to show on screen:

- Building a chatbot with Tidio or similar
- Connecting to ChatGPT/OpenAI
- Embedding on a website

Step-by-step recording guide:

1. Open Tidio (tidio.com) or your chosen chatbot platform. Sign up or log in.
2. Create a new chatbot. Name it: "AI Business Assistant"
3. Set up the welcome message: "Hi! I'm the WavesTech assistant. I can answer questions about our services, help you book a consultation, or connect you with our team. How can I help?"
4. Connect OpenAI API: go to Settings > Integrations > OpenAI. Paste your API key.
5. Configure the AI personality: paste your business info, services, pricing, FAQs into the knowledge base
6. Set up conversation flows: greeting > question classification > AI response > follow-up CTA
7. Test the chatbot in the preview window. Ask 3-4 different questions.
8. Show the embed code. Copy the JavaScript snippet.
9. Open a test website (or WordPress). Paste the code into the footer. Show the chatbot appearing on the site.
10. Show the chatbot responding to visitors in real-time

What to say (suggested script):

A chatbot on your website converts visitors into leads automatically. Let me show you how to build one in 15 minutes.

Lesson 52: Email Marketing Automation with AI

Duration: 12-15 minutes

What to show on screen:

- Email platform setup (Mailchimp/MailerLite)
- AI-written email sequence
- Automation workflow

Step-by-step recording guide:

1. Open MailerLite (mailerlite.com) or Mailchimp. Show the dashboard.
2. Create a new subscriber group: "AI Course Leads"
3. Set up a sign-up form or landing page with the drag-and-drop builder.
4. Now create the email sequence. Open ChatGPT: "Write a 3-email welcome sequence for new subscribers to an AI consulting newsletter. Email 1: Welcome + quick win tip. Email 2: Case study of a client who saved 20 hours/week with AI. Email 3: Invitation to book a free consultation."
5. Copy each email into MailerLite. Create 3 emails in the sequence.
6. Set timing: Email 1 = immediately, Email 2 = Day 3, Email 3 = Day 7
7. Set up the automation: New subscriber > Wait > Send Email 1 > Wait 3 days > Send Email 2 > Wait 4 days > Send Email 3
8. Show personalisation: adding subscriber name with merge tags like {name}
9. Activate the automation. Show it running by subscribing a test email.

What to say (suggested script):

Email marketing still has the highest ROI of any marketing channel. With AI, you can set it up in one afternoon and let it run forever.

Lesson 53: Social Media Automation

Duration: 8-10 minutes

What to show on screen:

- Buffer or Later setup
- Batch-creating 7 days of posts with AI
- Scheduling and analytics

Step-by-step recording guide:

1. Open Buffer (buffer.com). Sign up or log in. Connect your social accounts (Instagram, LinkedIn, Twitter).
2. Open ChatGPT: "Create 7 days of social media posts for an AI consulting business. For each day, write: 1 Instagram caption with hashtags, 1 LinkedIn post, 1 tweet. Mix content types: educational, behind-the-scenes, client results, tips, engagement questions."
3. Copy each post into Buffer's composer. Show the scheduling calendar.
4. Schedule all 21 posts across the week. Show the visual calendar view.
5. Show Buffer's analytics: best posting times, engagement rates, top-performing posts
6. Show how to set up recurring time slots so future posts auto-fill into optimal times

What to say (suggested script):

7 days of content, scheduled in under 30 minutes. That's the power of AI plus automation.

Lesson 54: Client Onboarding Automation

Duration: 12-15 minutes

What to show on screen:

- Complete client onboarding workflow in Make.com

- Automated folder creation, emails, CRM entry

Step-by-step recording guide:

1. Open Make.com. Create a new scenario: "Client Onboarding"
2. Module 1 - Trigger: Google Forms (new client fills onboarding form with: name, email, company, project type, budget)
3. Module 2 - Google Drive: Create a new folder named after the client in your 'Clients' folder. Create subfolders: Contracts, Assets, Deliverables.
4. Module 3 - Gmail: Send a personalised welcome email (use ChatGPT module to generate it based on their project type)
5. Module 4 - Google Calendar: Schedule a kickoff call 3 days from now
6. Module 5 - Google Sheets or CRM: Add the client to your client database with all their info
7. Module 6 - Slack notification (optional): Send yourself a message about the new client
8. Connect all modules. Map the data fields.
9. Test the entire workflow with a sample submission. Show each step executing.
10. Show the result: folder created, email sent, calendar event added, CRM updated - all automatically

What to say (suggested script):

Every time you get a new client, this automation handles all the setup in seconds. No more manual busywork.

PRO TIP: This is a high-value automation that students can sell to clients immediately

Lesson 55: Module 4 Quiz & Automation Build

Duration: 3-5 minutes

What to show on screen:

- Quiz walkthrough
- Sample automation portfolio

Step-by-step recording guide:

1. Open the quiz. Walk through format.
2. Show a completed automation portfolio: screenshots of 3-4 Make.com scenarios you've built
3. Explain the exercise: build your own automation that solves a real business problem
4. Show submission process

What to say (suggested script):

Build something real. Pick a repetitive task and automate it.

Module 5: AI SEO & Marketing

Lesson 56: Introduction to AI SEO & Marketing

Duration: 5-8 minutes

What to show on screen:

- Google Search Console or analytics demo
- Organic traffic graphs
- Basic SEO concepts

Step-by-step recording guide:

1. Open Google and search for a business-related term. Show the organic results vs paid ads. Explain the difference.
2. Open Google Search Console (or show a demo screenshot). Show impressions, clicks, average position.
3. Show a real traffic graph: a website before SEO and after - the growth curve
4. Explain the 3 pillars: Keywords (what people search for), Content (what you create to match), and Links (how Google trusts your site)
5. Preview the module: by the end, students will know how to get their AI business found on Google

What to say (suggested script):

SEO is how you get free, ongoing traffic from Google. No ads, no cold outreach - people come to you.

With AI, you can do SEO 10 times faster than traditional methods.

Lesson 57: AI Keyword Research & Content Strategy

Duration: 10-12 minutes

What to show on screen:

- Free keyword research tools
- ChatGPT for keyword analysis
- Content plan creation

Step-by-step recording guide:

1. Open Ubersuggest (neilpatel.com/ubersuggest) or Google Keyword Planner. Search for "AI consulting".
2. Show results: search volume, difficulty, CPC. Explain each metric simply.
3. Find 10 keywords related to AI services. Copy them into a Google Sheet.
4. Open ChatGPT: "I'm an AI consulting business targeting UK small businesses. Analyse these 10 keywords and tell me which ones I should target first based on: low competition, high buyer intent, and relevance to my services."
5. Show the AI analysis. It should rank the keywords and explain why.
6. Ask ChatGPT: "Now create a content plan. For each of the top 5 keywords, give me: a blog post title, the content angle, and 3 secondary keywords to include."

7. Copy the content plan into your Google Sheet. Show the complete keyword-to-content mapping.

What to say (suggested script):

Keyword research is the foundation of SEO. Without it, you're creating content nobody is searching for.

Lesson 58: SEO Content That Ranks

Duration: 12-15 minutes

What to show on screen:

- Writing a fully SEO-optimised article with AI
- Proper heading structure
- Yoast or RankMath plugin scoring

Step-by-step recording guide:

1. Pick a keyword from the previous lesson (e.g., "AI tools for small business")
2. Open ChatGPT: "Write a 2,000-word SEO-optimised blog post targeting the keyword 'AI tools for small business'. Include: H1 title with keyword, 5 H2 subheadings, H3 sub-sections, keyword naturally 5-8 times, internal link placeholders, meta title under 60 chars, meta description under 155 chars."
3. Show the result. Highlight the SEO structure: headings, keyword placement, internal links.
4. Open WordPress. Create a new post. Paste the content.
5. Format with proper H2 and H3 headings. Add a featured image (from Leonardo AI).
6. Install/open Yoast SEO or RankMath plugin. Show the SEO analysis panel.
7. Add the focus keyword. Walk through each recommendation until the score turns green.
8. Add internal links to other posts on the site. Add 1-2 external links to authority sources.
9. Show the readability score and fix any issues.
10. Preview the post and show how it looks on the frontend

What to say (suggested script):

Ranking on Google isn't magic - it's a formula. And AI can handle most of the heavy lifting.

PRO TIP: Show a real WordPress site so the demo feels authentic

Lesson 59: AI Content Publishing Automation

Duration: 10-12 minutes

What to show on screen:

- Auto-publishing workflow: AI generates > publishes to WordPress > shares to social
- Make.com pipeline

Step-by-step recording guide:

1. Open Make.com. Create a new scenario: "Auto Content Publisher"
2. Module 1 - Schedule: Set to run weekly on Mondays

3. Module 2 - OpenAI: Generate a blog post based on a list of pre-planned topics (pull from Google Sheet)
4. Module 3 - WordPress: Create a new draft post with the AI content, set category and tags
5. Module 4 - Buffer or social tool: Share the post URL to social media channels
6. Module 5 - Email: Send a notification that new content was published
7. Connect and test the pipeline. Show a test run creating an actual draft in WordPress.
8. Show the Google Sheet with topic ideas that feeds the automation
9. Explain: set up 20 topics, and the automation publishes one per week for 5 months

What to say (suggested script):

Imagine content appearing on your blog and social media every week, without you lifting a finger. That's what we're building.

Lesson 60: AI-Powered Ad Campaigns

Duration: 10-12 minutes

What to show on screen:

- Meta Ads Manager or Google Ads interface
- AI-written ad copy variations
- AI-generated ad images

Step-by-step recording guide:

1. Open Meta Ads Manager (business.facebook.com/adsmanager). Show the campaign creation screen.
2. Open ChatGPT: "Write 5 variations of a Facebook ad for an AI consulting service targeting small business owners. Each ad needs: headline (under 40 chars), primary text (under 125 chars), description (under 30 chars). Tone: professional, results-focused."
3. Show the 5 variations. Pick the best 3.
4. Open Leonardo AI. Generate ad images: "Professional, clean Facebook ad image for an AI consulting business, showing a business person using technology, blue and white colour scheme, no text on image"
5. Return to Meta Ads Manager. Set up the campaign structure: Campaign > Ad Set > Ad
6. Show targeting options: location, age, interests (small business, entrepreneurship, technology)
7. Paste the AI-generated copy and upload the AI images
8. Show A/B test setup: 2 different headlines against each other
9. Explain budget settings: start with a small daily budget of 5-10 pounds to test
10. Do NOT click Publish - explain this is for demonstration purposes

What to say (suggested script):

AI can write your ad copy, create your images, and even help you optimise campaigns. Let me show you the process.

PRO TIP: Make it clear you're showing the setup process - don't accidentally publish an ad

Lesson 61: Module 5 Quiz & SEO Project

Duration: 3-5 minutes

What to show on screen:

- Quiz walkthrough
- Sample SEO audit

Step-by-step recording guide:

1. Open the quiz. Walk through format.
2. Show a sample SEO audit: keyword rankings, content gaps, competitor analysis
3. Explain the exercise: perform an SEO audit on your own website or a sample site
4. Show submission process

What to say (suggested script):

| *Apply what you've learned - audit a real website and find opportunities.*

Module 6: AI Sales & Revenue

Lesson 62: AI-Powered Sales Funnels

Duration: 10-12 minutes

What to show on screen:

- Funnel diagram
- Landing page creation
- Lead magnet > email > offer flow

Step-by-step recording guide:

1. Draw or display a funnel diagram: Awareness > Interest > Desire > Action
2. Translate to digital: Ad/Content > Landing Page > Lead Magnet > Email Sequence > Sales Page > Purchase
3. Open Carrd.co or a similar landing page builder. Create a simple lead magnet page: "Download our free AI Toolkit Guide"
4. Build the page: headline, bullet points of what's included, email capture form, CTA button
5. Open ChatGPT: "Write the content for a lead magnet landing page for a free AI Toolkit Guide for small businesses. Include: headline, subheadline, 5 bullet points of what's inside, and a CTA."
6. Paste the AI content into the landing page builder. Style it.
7. Show how the funnel connects: landing page > email opt-in > automated email sequence (from Module 4) > sales pitch

What to say (suggested script):

A sales funnel is how you turn strangers into paying clients, automatically. Let me show you how to build one.

Lesson 63: Lead Generation with AI

Duration: 10-12 minutes

What to show on screen:

- LinkedIn prospect finding
- AI outreach messages
- CRM setup

Step-by-step recording guide:

1. Open LinkedIn. Use the search bar to find potential clients: search for "small business owner" in your target location
2. Show LinkedIn Sales Navigator if available, or the free search filters
3. Open ChatGPT: "Write 5 personalised LinkedIn connection request messages for reaching out to small business owners about AI consulting services. Each should be under 300 characters, friendly, and not salesy."
4. Show the messages. Pick the best ones.
5. Open HubSpot CRM (free version). Show the contacts dashboard.

6. Add a sample lead manually. Show the deal pipeline: Lead > Contacted > Meeting Booked > Proposal Sent > Closed Won
7. Set up a lead capture form in HubSpot. Show how it auto-creates contacts.
8. Show the activity timeline for a contact: emails, calls, notes

What to say (suggested script):

Getting leads doesn't have to mean cold calling hundreds of people. AI helps you find and reach the right people.

Lesson 64: AI Pricing & Packaging Strategies

Duration: 8-10 minutes

What to show on screen:

- Creating pricing tiers with AI
- Pricing page mockup
- Value-based pricing calculations

Step-by-step recording guide:

1. Open ChatGPT: "I'm starting an AI consulting business. Help me create 3 pricing tiers (Starter, Growth, Premium) for my AI automation services. Include: what's included in each tier, the target client for each, and suggested pricing in GBP."
2. Show the result. Discuss the pricing logic: anchoring, decoy pricing, value perception.
3. Show a pricing page example from a real SaaS company. Point out the design patterns: recommended tier highlighted, annual vs monthly toggle.
4. Open a spreadsheet. Calculate value-based pricing: "If our automation saves a client 20 hours/month at 30 pounds/hour, that's 600 pounds in savings. Charging 297/month is 50% of the value they receive."
5. Show how to present pricing in a proposal (preview of Lesson 67)

What to say (suggested script):

Pricing is one of the biggest decisions you'll make. Let me help you get it right from the start.

Lesson 65: Building Recurring Revenue (MRR)

Duration: 8-10 minutes

What to show on screen:

- Stripe subscription setup
- MRR projections spreadsheet
- Retention metrics

Step-by-step recording guide:

1. Open Stripe (dashboard.stripe.com). Show how to create a subscription product.
2. Create a sample product: "AI Automation Package - Growth Tier" at 297 pounds/month.
3. Show the pricing table feature - embed a pricing page on your website.
4. Open a Google Sheet. Build an MRR projection: start with 0 clients, add 2/month, 5% churn. Show month-by-month growth.

5. Formula: $MRR = (\text{number of clients} \times \text{monthly price}) - \text{churned clients}$
6. Show the graph: how MRR compounds over 12 months. With 2 new clients/month at 297 each, that's 5,940 pounds/month MRR by month 12.
7. Show churn impact: reducing churn from 10% to 5% doubles your revenue over time
8. Explain retention strategies: regular check-ins, monthly reports, quarterly reviews

What to say (suggested script):

Recurring revenue is the holy grail of business. Let me show you exactly how to build it.

Lesson 66: AI for Client Retention

Duration: 8-10 minutes

What to show on screen:

- Automated check-in emails
- Client feedback surveys
- Health score tracker

Step-by-step recording guide:

1. Open your email platform. Create an automated check-in email sequence for existing clients: Day 30, Day 60, Day 90 after signing up.
2. Use ChatGPT to write each check-in email: personalised, asking for feedback, sharing a quick win or tip
3. Show how to create a client feedback survey using Google Forms or Typeform: NPS score, satisfaction rating, improvement suggestions
4. Open a Google Sheet. Create a Client Health Score tracker: columns = Client Name, Last Contact, NPS Score, Usage Level, Risk Level (Red/Yellow/Green)
5. Show a formula that calculates the health score based on these factors
6. Demonstrate: how to spot at-risk clients early and intervene before they churn
7. Show an automation in Make.com: if NPS score drops below 7, automatically notify you and schedule a call

What to say (suggested script):

Keeping clients is 5 times cheaper than getting new ones. Here's how AI helps you keep every single one.

Lesson 67: AI Proposals & Closing Deals

Duration: 10-12 minutes

What to show on screen:

- Full proposal creation with AI
- Professional template
- E-signature setup

Step-by-step recording guide:

1. Open ChatGPT: "Write a professional business proposal for an AI consulting project. Client: a law firm wanting to automate document review and client intake. Include:

executive summary, understanding their problem, proposed solution (3 phases), timeline (8 weeks), investment (7,500 pounds), ROI projection, 2 testimonials, and next steps."

2. Show the complete proposal. Walk through each section.
3. Open Canva (canva.com). Search for 'business proposal template'. Pick a professional one.
4. Paste the AI content into the Canva template. Customise colours and branding.
5. Alternative: show Google Docs template - simpler but also professional
6. Export as PDF. Show how clean it looks.
7. Open HelloSign or DocuSign (free tier). Upload the proposal.
8. Add signature fields. Send for e-signature.
9. Show the tracking: when the client opens it, how long they spent on each page

What to say (suggested script):

A great proposal doesn't just describe what you'll do - it makes the client feel confident that you're the right person.

AI writes the content, you add the personal touch.

PRO TIP: This is a skill students can use immediately to land real clients

Lesson 68: Module 6 Quiz & Sales Plan

Duration: 3-5 minutes

What to show on screen:

- Quiz walkthrough
- Sales plan template

Step-by-step recording guide:

1. Open the quiz. Walk through format.
2. Show a completed sales plan: target market, pricing, funnel, 90-day revenue goal
3. Explain the exercise: create your own sales plan
4. Show submission process

What to say (suggested script):

Put everything together into a real sales plan you can start executing tomorrow.

Module 7: Building Your AI Business

Lesson 69: Choosing Your AI Business Model

Duration: 8-10 minutes

What to show on screen:

- 4 business models compared
- ChatGPT evaluation questionnaire
- Revenue projections

Step-by-step recording guide:

1. Display a comparison chart with 4 columns: Freelancer, Agency, SaaS Product, Productised Service
2. For each model, show: time investment, startup cost, revenue potential, scalability, complexity
3. Open ChatGPT: "Help me choose the best AI business model. Ask me 10 questions about my goals, skills, budget, and desired lifestyle, then recommend the best model for me."
4. Answer the questions live on screen as if you're a student going through the exercise
5. Show the AI's recommendation and reasoning
6. Open a spreadsheet. Show revenue projections for each model over 12 months: Freelancer (trade time for money), Agency (team leverage), SaaS (product leverage), Productised (service at scale)

What to say (suggested script):

*There's no one right business model - it depends on YOUR goals, skills, and lifestyle.
Let me help you figure out which one fits you best.*

Lesson 70: Building Your AI Brand & Portfolio

Duration: 10-12 minutes

What to show on screen:

- Portfolio site creation with Carrd or Framer
- AI-written copy
- Brand asset generation

Step-by-step recording guide:

1. Open Carrd.co (free plan). Click 'Create' and start with a blank template.
2. Build a portfolio page section by section: Hero (name + tagline), About, Services (3 cards), Portfolio (case studies), Testimonials, Contact form
3. Use ChatGPT to write all the copy: "Write website copy for an AI consultant's portfolio site. Include: a tagline, 3-sentence bio, 3 service descriptions (AI Automation, AI Content, AI Voice/Video), and a CTA."
4. Paste the copy into Carrd. Style it with professional fonts and colours.
5. Open Leonardo AI. Generate a professional headshot-style image or brand graphics.
6. Add the images to the portfolio site.
7. Show a before/after: a generic, empty portfolio vs the polished, AI-built one

8. Publish the site. Show the live URL.

What to say (suggested script):

Your portfolio is your first impression. Clients judge you before they even speak to you. Let me help you make it count.

Lesson 71: Getting Your First 5 Clients

Duration: 10-12 minutes

What to show on screen:

- LinkedIn prospecting live
- AI outreach messages
- Freelance platform profiles

Step-by-step recording guide:

1. Open LinkedIn. Search for potential clients in your niche.
2. Show how to use Boolean search: "small business owner AND (London OR Manchester)"
3. Open ChatGPT: "Write 5 different cold outreach messages for LinkedIn, each targeting a different type of small business owner. Personalisation slots: [name], [company], [industry]. Tone: friendly, helpful, not salesy."
4. Show the messages. Pick the best 2. Explain why they work.
5. Open Upwork (upwork.com). Show how to create a profile for AI services.
6. Write a profile summary with AI. Show the skills to add, portfolio pieces to upload.
7. Open Fiverr (fiverr.com). Create a gig for AI automation services.
8. Use AI to write the gig description, pricing tiers, and FAQ section
9. Show email outreach: "Write a cold email to a local business offering a free AI audit. Keep it under 100 words with a clear CTA."
10. Summarise the 5 channels: LinkedIn, Upwork, Fiverr, cold email, referrals

What to say (suggested script):

You don't need hundreds of clients to build a great business. You just need 5 good ones to start.

Lesson 72: Scaling with Systems & Team

Duration: 10-12 minutes

What to show on screen:

- Project management setup
- SOP creation with AI
- Client reporting automation

Step-by-step recording guide:

1. Open Notion (notion.so) or Trello. Create a project management workspace: boards for Active Projects, Pipeline, Completed
2. Create a project template with: client name, project type, deadline, status, tasks checklist

3. Open ChatGPT: "Write a Standard Operating Procedure (SOP) for client onboarding at an AI consulting agency. Include every step from initial contact to project kickoff. Format with numbered steps, responsible person, and estimated time."
4. Show the SOP result. Paste it into Notion as a reusable template.
5. Show how to create a Loom video (loom.com) walkthrough for delegating tasks to a team member
6. Open Google Data Studio or a Google Sheet. Build a simple client report template: metrics, progress, next steps
7. Show automation in Make.com: auto-generate monthly client reports from a Google Sheet and email them

What to say (suggested script):

If you want to grow beyond solo freelancing, you need systems. Let me show you how to build them.

Lesson 73: Build a Social Media Management Agent

Duration: 20-25 minutes

What to show on screen:

- Complete end-to-end social media management workflow
- Content generation, image creation, scheduling, reporting

Step-by-step recording guide:

1. This is the capstone project. Show the full workflow overview first: Content Ideas > Content Creation > Image Generation > Scheduling > Analytics
2. Step 1 - Open ChatGPT: "I manage social media for a wellness brand. Generate 20 content ideas across 4 pillars: education, inspiration, product promotion, and community engagement."
3. Step 2 - Pick 7 ideas for the week. Ask AI to write full posts for each: platform-specific copy for Instagram, LinkedIn, and Twitter
4. Step 3 - Open Leonardo AI. Generate images for each post: product photos, lifestyle images, quote graphics
5. Step 4 - Open Buffer or Later. Create and schedule all posts across all platforms for the week.
6. Step 5 - Show the content calendar view. Everything scheduled and ready.
7. Step 6 - Open Make.com. Build an automation: every Monday, AI generates new content ideas and sends them to you for review.
8. Step 7 - Show analytics after a week: impressions, engagement, clicks. Create a simple report.
9. Step 8 - Package this as a service: "AI Social Media Management - 497/month. Includes: 21 posts/week across 3 platforms, monthly analytics report, content strategy call."
10. Show how this entire workflow takes about 2-3 hours per week per client

What to say (suggested script):

This is the big one. We're building a complete social media management service powered by AI.

By the end of this lesson, you'll have a sellable service that you can offer to clients immediately.

PRO TIP: This is the most important practical lesson in the course. Take your time and show every step clearly.

Lesson 74: Module 7 Quiz & Business Plan

Duration: 3-5 minutes

What to show on screen:

- Quiz walkthrough
- Business plan template

Step-by-step recording guide:

1. Open the quiz. Walk through format.
2. Show a completed business plan: mission, target market, services, pricing, marketing strategy, financial projections
3. Explain the exercise: create your own AI business plan
4. Show submission process

What to say (suggested script):

This business plan is your roadmap. Take it seriously - it's the blueprint for your AI business.

Module 8: Ethics, Legal & Launch

Lesson 75: AI Ethics & Responsible Use

Duration: 5-8 minutes

What to show on screen:

- Ethical vs unethical AI examples
- AI detection tools
- Disclosure practices

Step-by-step recording guide:

1. Show 3 examples of ethical AI use: (1) Using AI to draft content that you edit and personalise, (2) AI chatbot with clear 'I am an AI' disclosure, (3) AI-generated images labelled as AI-created
2. Show 3 examples of unethical AI use: (1) Passing off AI writing as entirely human-written in journalism, (2) Deepfake videos without consent, (3) AI-generated fake reviews
3. Open GPTZero (gptzero.me). Paste some AI-generated text. Show the detection result.
4. Open Originality.ai. Run the same text. Show the score.
5. Show how to humanise AI content: edit it, add personal stories, change the structure
6. Show a simple disclosure template: "This content was created with the assistance of AI tools and reviewed by [your name]."

What to say (suggested script):

With great power comes great responsibility. Let's talk about how to use AI ethically in your business.

Lesson 76: Legal Protection for Your AI Business

Duration: 8-10 minutes

What to show on screen:

- Client contract template
- Key clauses walkthrough
- Free template resources

Step-by-step recording guide:

1. Open a contract template (use a free one from Docsketch, Bonsai, or similar)
2. Walk through key clauses: Scope of Work, Payment Terms, Intellectual Property, Confidentiality, Limitation of Liability, Termination
3. Highlight AI-specific clauses: who owns AI-generated content? Is there an AI disclosure requirement?
4. Open ChatGPT: "Write a service agreement clause for an AI consulting business that covers: AI tool usage disclosure, data handling and privacy, intellectual property of AI-generated outputs, and limitation of liability for AI accuracy."
5. Show the result. Explain each part.
6. Show where to get free contract templates: Bonsai, AND.CO, PandaDoc
7. Disclaimer: recommend consulting a solicitor for final contract review

What to say (suggested script):

Contracts protect both you and your clients. You don't need a lawyer to start, but you do need the basics covered.

PRO TIP: Add a disclaimer that you're not providing legal advice - always recommend professional legal review

Lesson 77: Copyright & Intellectual Property in AI

Duration: 5-8 minutes

What to show on screen:

- AI content ownership examples
- Copyright checking tools
- Creative Commons licensing

Step-by-step recording guide:

1. Explain the current legal landscape: who owns AI-generated content? Show relevant news articles or court cases.
2. Show the key principle: AI outputs are tools - the person who directs the AI and edits the output generally holds the rights (jurisdiction dependent)
3. Open a stock photo site. Show the difference between copyrighted, royalty-free, and Creative Commons images.
4. Show how to check for copyright issues: reverse image search (Google Images), TinEye
5. Open the Creative Commons website. Explain the licence types: CC0, CC-BY, CC-BY-SA
6. Best practices: always modify AI outputs, keep records of your prompts, add your own creative direction
7. Show a simple IP assignment clause for client contracts

What to say (suggested script):

Copyright law is still catching up with AI. Here's what you need to know right now to protect yourself.

Lesson 78: Your 90-Day Launch Plan

Duration: 10-12 minutes

What to show on screen:

- Building a 90-day action plan live
- Spreadsheet or Notion template
- Milestone goals

Step-by-step recording guide:

1. Open a Google Sheet or Notion template. Create 3 columns: Days 1-30, Days 31-60, Days 61-90
2. Days 1-30 (Foundation): Week 1: Choose business model, set up tools. Week 2: Build portfolio site, create sample content. Week 3: Set up automations, create lead magnet. Week 4: Write outreach templates, join 3 communities.

3. Days 31-60 (Growth): Week 5: Start outreach (10 messages/day). Week 6: First discovery calls, first proposal. Week 7: Land first client, start delivering. Week 8: Get testimonial, create case study.
4. Days 61-90 (Scale): Week 9: Systemise delivery, create SOPs. Week 10: Raise prices, add second service tier. Week 11: Hire first VA or contractor. Week 12: Launch recurring revenue offer.
5. Add milestone goals: Month 1 = 1 paying client, Month 2 = 3 clients + 1 testimonial, Month 3 = 5 clients + MRR setup
6. Add financial targets: Month 1 = 500 pounds, Month 2 = 2,000 pounds, Month 3 = 5,000 pounds/month
7. Show how to track progress: weekly check-ins, green/yellow/red status for each milestone

What to say (suggested script):

This is your roadmap for the next 90 days. Follow it step by step and you'll have a real, revenue-generating AI business.

PRO TIP: Make this actionable and specific - students should be able to start executing immediately after watching

Lesson 79: The AI Entrepreneur Mindset

Duration: 5-8 minutes

What to show on screen:

- Income calculator
- Daily routine template
- Goal-setting framework

Step-by-step recording guide:

1. This is a more motivational, talking-head style lesson. Show your face more, show your screen less.
2. Open a spreadsheet: Income Calculator. If you serve 5 clients at 500/month = 2,500 MRR. 10 clients at 500 = 5,000 MRR. Show how the numbers scale.
3. Show a daily routine template for an AI entrepreneur: Morning = learning/growth (30 min), Mid-morning = client delivery (3 hours), Afternoon = marketing/outreach (2 hours), Evening = admin/planning (1 hour)
4. Show a goal-setting framework: Annual goal > Quarterly milestones > Monthly targets > Weekly actions > Daily habits
5. Share 3 mindset principles: (1) Done is better than perfect, (2) Serve before you sell, (3) Compound effort beats one-time sprints
6. Show a quick journaling template: 3 wins today, 1 lesson learned, 1 priority for tomorrow

What to say (suggested script):

Skills without mindset won't get you far. Mindset without skills won't either. You need both.

I want to share the principles that separate successful AI entrepreneurs from everyone else.

Lesson 80: Staying Current with AI

Duration: 5-8 minutes

What to show on screen:

- AI newsletters, Twitter accounts, communities
- Google Alerts setup
- Learning resources

Step-by-step recording guide:

1. Show the top AI newsletters to subscribe to: The Rundown AI, TLDR AI, Ben's Bites, AI Tool Report
2. Show Twitter/X accounts to follow: @OpenAI, @AnthropicAI, @GoogleAI, AI influencers in your niche
3. Show AI communities: r/artificial on Reddit, AI-focused Discord servers, Facebook groups
4. Open Google Alerts ([google.com/alerts](https://www.google.com/alerts)). Create alerts for: 'AI tools for business', 'AI automation news', 'generative AI updates'
5. Show YouTube channels for AI learning: Matt Wolfe, AI Explained, The AI Advantage
6. Show a monthly learning plan: 1 new tool per week, 1 newsletter daily, 1 community discussion per week
7. Explain: the AI landscape changes weekly. Continuous learning is not optional - it's part of the business.

What to say (suggested script):

AI moves fast. What's cutting-edge today might be outdated in 6 months. Here's how to stay ahead.

Lesson 81: Module 8 Quiz & Graduation

Duration: 3-5 minutes

What to show on screen:

- Final quiz
- Certificate of completion
- Celebration

Step-by-step recording guide:

1. Open the final quiz. Walk through the format one last time.
2. Show the certificate of completion that students receive after passing.
3. Congratulate students. Recap the full journey: from AI basics to running a business.
4. Share next steps: join the community, start executing the 90-day plan, come back for advanced modules
5. End with a personal message of encouragement. Be genuine and warm.

What to say (suggested script):

*You did it! You've completed the entire WavesAI Academy course.
You now have the skills, the tools, and the plan to build a successful AI business.
I can't wait to see what you build. Go out there and make it happen!*

PRO TIP: Make this emotional and celebratory - it's the culmination of the entire course

You're Ready to Record!

This guide covers every lesson in the WavesAI Academy course. Follow the scripts step by step, and you'll create professional, engaging practical videos that your students will love.

Remember: authenticity matters more than perfection. If you make a small mistake, keep going - it makes you relatable. Students want to learn from a real person, not a robot.

Good luck with your recordings! Your students are going to love this course.
