

MODULE 3

Voice & Video AI Agents

Build AI voice agents that answer phones 24/7 and create professional video content without a camera crew.

"Success is not final, failure is not fatal: it is the courage to continue that counts."

-- Winston Churchill

LESSONS IN THIS MODULE:

1. Introduction to AI Voice & Video Technology
2. Building AI Voice Agents with Vapi
3. Creating Professional Voiceovers with ElevenLabs
4. AI Video Avatars: HeyGen & D-ID
5. Short-Form Content Factory
6. BUILD PROJECT: Customer Service AI Agent
7. Module 3 Quiz & Video Project

WavesAI Academy | Master AI Agents & Automation

Learning Objectives

By the end of Module 3, you will be able to:

- Understand the landscape of AI voice and video tools
- Identify which tools to use for different business needs
- Set up a complete AI phone agent from scratch
- Configure call flows, scripts, and integrations
- Generate studio-quality voiceovers for any project
- Clone voices for brand consistency
- Create talking-head videos without a camera
- Build a video content production workflow
- Build a system for producing short-form video at scale
- Understand platform requirements for TikTok, Instagram Reels, and YouTube Shorts
- Build a complete, working customer service AI agent from scratch
- Deploy it and test it with real conversations
- Review voice and video AI concepts
- Create a complete video asset as a portfolio piece

Lesson 1: Introduction to AI Voice & Video Technology

The Voice & Video AI Revolution

AI can now clone voices, create talking head videos, answer phone calls, and produce professional video ads - all without a recording studio or camera crew. This module covers the tools and techniques that let you offer these high-value services to clients.

Voice agents (AI that answers phone calls) are one of the hottest AI services right now. Businesses are paying 1,000-3,000 GBP for a voice agent that handles incoming calls, books appointments, and qualifies leads 24/7. Video avatars let you create professional talking-head videos for training, sales, and social media without ever appearing on camera.

Tools You Will Master in This Module

Vapi (vapi.ai)

AI phone agent platform. Build voice agents that answer calls, follow scripts, and integrate with calendars and CRMs. The backbone of AI phone services.

ElevenLabs (elevenlabs.io)

Industry-leading voice synthesis. Clone any voice, create voiceovers in 29 languages, professional text-to-speech. Used for podcasts, videos, and phone agents.

HeyGen (heygen.com)

AI video avatar platform. Create talking-head videos with realistic avatars. Perfect for training content, sales videos, and social media.

D-ID (d-id.com)

Animate photos into talking videos. Turn a headshot into a speaking presenter. Great for personalised video messages.

WavesAI Studio

Your all-in-one creative suite. Use the text-to-speech, sound effects, and video tools already included in your course access.

Revenue Potential

- AI Voice Agent Setup: 1,000-3,000 GBP per client
- Monthly voice agent management: 200-500 GBP/month retainer
- AI Video production: 200-1,000 GBP per video
- Video content packages: 500-2,000 GBP/month for ongoing content
- Voice cloning for brands: 500-1,500 GBP one-time setup

Pro Tip: Voice agents are the easiest AI service to demonstrate to potential clients. Call the agent yourself during a sales meeting and let them hear it in action. Nothing sells better than a live demo.

PRACTICE EXERCISE

Create free accounts on ElevenLabs, HeyGen, and Vapi. Generate a sample voiceover on ElevenLabs using one of the default voices. Notice the quality - this is what you will be offering to clients.

Lesson 2: Building AI Voice Agents with Vapi

What is an AI Voice Agent?

An AI voice agent is a phone system powered by artificial intelligence that can answer calls, hold natural conversations, book appointments, answer questions, qualify leads, and transfer to a human when needed. It works 24/7, never takes breaks, and handles multiple calls simultaneously.

Setting Up Your First Voice Agent

Step 1: Sign up at vapi.ai and create a new assistant.

Step 2: Choose a voice from the voice library or connect your ElevenLabs voice clone.

Step 3: Write the system prompt (the agent's personality and instructions): "You are Sarah, the receptionist at [Business Name]. You are friendly, professional, and helpful. Your job is to answer questions about our services, check appointment availability, and book appointments for callers."

Step 4: Define the knowledge base: Upload the business FAQ, service list, pricing, and hours of operation.

Step 5: Set up the conversation flow: greeting, qualification questions, appointment booking, farewell.

Step 6: Configure integrations: Connect to Google Calendar for real-time availability, connect to CRM for lead capture.

Step 7: Get a phone number: Vapi provides phone numbers or you can forward your client's existing number.

Step 8: Test extensively: Call the agent yourself 20+ times with different scenarios before going live.

Voice Agent Script Template

Here is a proven script structure for a service business voice agent:

- Greeting: "Hi, thanks for calling [Business]. I'm [Name], how can I help you today?"
- Listen & Identify: Determine if they want information, to book, or have a complaint
- Provide Info: Answer from the knowledge base with accurate, concise responses
- Qualify: "Can I get your name and the best number to reach you?"
- Book/Transfer: Either book an appointment or transfer to a human for complex issues
- Confirm & Close: "Great, you're all set for [date/time]. Is there anything else I can help with?"

Pro Tip: Always include a fallback for when the AI cannot answer: "That's a great question. Let me connect you with someone who can help with that specifically." This prevents frustration and maintains professionalism.

PRACTICE EXERCISE

Create a voice agent for a fictional dental practice. Write the system prompt, list 10 FAQs the agent should know (opening hours, services, emergency protocol, insurance accepted, etc.), and define the appointment booking flow.

Lesson 3: Creating Professional Voiceovers with ElevenLabs

Why AI Voiceovers Are a Game-Changer

A professional voiceover artist charges 200-1,000 GBP per project and needs days of turnaround. ElevenLabs generates studio-quality voiceovers in seconds, in 29 languages, with customisable emotion and pace. You can offer voiceover services at a fraction of the traditional cost while keeping healthy margins.

Using ElevenLabs Step by Step

Step 1: Go to elevenlabs.io and log in.

Step 2: Navigate to "Text to Speech" in the dashboard.

Step 3: Select a voice from the library. Listen to samples to find one that matches your project (professional, warm, energetic, calm).

Step 4: Paste your script into the text box. For best results, use short sentences, add commas for pauses, and use ellipsis (...) for longer pauses.

Step 5: Adjust settings: Stability (higher = more consistent, lower = more expressive), Clarity (higher = cleaner audio), Style (controls emotional expression).

Step 6: Click Generate and download the audio file.

Step 7: For long scripts, generate in sections and combine using WavesAI Studio's video editor.

Voice Cloning

ElevenLabs can clone any voice from a 1-minute audio sample. This is powerful for brand consistency - clone the business owner's voice and use it for all their content. They sound like themselves without spending hours recording.

- Record a 1-2 minute clear audio sample (no background noise)
- Upload to ElevenLabs Voice Lab
- The AI learns the voice patterns, tone, and style
- Generate unlimited content in that cloned voice
- Always get written permission before cloning someone's voice

Use Cases That Sell

- YouTube video narration
- Podcast episodes and intros
- Phone system greetings and IVR menus
- E-learning course narration
- Radio and social media ads
- Audiobook creation
- Multilingual content (same voice, different language)

Pro Tip: Use WavesAI Studio's text-to-speech for quick projects and ElevenLabs for premium, client-facing work. Both are included in your toolkit.

PRACTICE EXERCISE

Write a 30-second radio ad script for a fictional restaurant launch. Generate the voiceover in ElevenLabs with 3 different voices. Pick the best one and save it. Then generate the same ad in a second language. Notice how the voice stays consistent across languages.

Lesson 4: AI Video Avatars: HeyGen & D-ID

Creating Videos Without a Camera

HeyGen and D-ID create realistic talking-head videos from just a photo and a script. The AI animates the face, syncs the lips to the audio, and produces a video that looks like someone actually recorded it. This is transformative for businesses that need video content but do not have the time, equipment, or confidence to record.

HeyGen Workflow

Step 1: Log in to heygen.com and select "Create Video."

Step 2: Choose an avatar - you can use one of HeyGen's stock avatars or upload a photo to create a custom one.

Step 3: Write your script or paste it from Claude AI.

Step 4: Select the voice (HeyGen has built-in voices, or connect your ElevenLabs clone).

Step 5: Choose the background - office, studio, custom image, or green screen.

Step 6: Generate the video. Processing takes 2-5 minutes for a 1-minute video.

Step 7: Download and use in your content.

Video Content Ideas for Clients

- Welcome videos for websites ("Hi, I'm Sarah from [Business], let me show you around...")
- Product explanation videos for e-commerce
- Training videos for employee onboarding
- Social media content (educational tips, announcements)
- Sales follow-up videos (personalised with the prospect's name)
- FAQ videos answering common customer questions
- Course content (like this course uses)

Pricing Your Video Services

- Single video (1-2 minutes): 200-500 GBP
- Video package (5 videos): 800-2,000 GBP
- Monthly content plan (4-8 videos/month): 1,000-3,000 GBP/month
- Custom avatar creation: 300-500 GBP one-time

Pro Tip: Create a 30-second demo video for your own AI services business. Use this in your outreach to potential clients - it shows them exactly what you can do.

PRACTICE EXERCISE

Create a 60-second welcome video using HeyGen for a fictional online store. Write the script with Claude, choose an avatar, and generate the video. Save it as a portfolio piece.

Lesson 5: Short-Form Content Factory

Why Short-Form Video Dominates

TikTok, Instagram Reels, and YouTube Shorts are where attention lives. Businesses that post short-form video consistently grow 3-5x faster than those that do not. The problem? Creating video content is time-consuming. The solution? AI.

The AI Content Factory Process

Step 1: Generate 30 content ideas using Claude: "Give me 30 short-form video ideas for a [type] business. Each should be educational or entertaining, under 60 seconds, and include a hook in the first 3 seconds."

Step 2: Write scripts with Claude: "Write a 45-second video script about [topic]. Start with a shocking hook, deliver 3 value points, and end with a call to action. Use casual, conversational language."

Step 3: Create the video with HeyGen or WavesAI Studio: Use an avatar or stock footage with voiceover.

Step 4: Add captions: Essential for accessibility and silent viewing. Most video editors have auto-caption features.

Step 5: Post with optimised hashtags and descriptions (Claude can write these too).

Step 6: Repeat daily or several times per week for best results.

Platform Specifications

- TikTok: 9:16 ratio, 15-60 seconds ideal, trending audio helps discovery
- Instagram Reels: 9:16 ratio, 15-30 seconds performs best, use 3-5 hashtags
- YouTube Shorts: 9:16 ratio, under 60 seconds, title matters for search
- LinkedIn Video: 1:1 or 16:9, 30-90 seconds, educational content performs best

Pro Tip: Batch create content. Spend 2-3 hours creating 2 weeks of content at once. Use Claude for all scripts, HeyGen for videos, and schedule them in advance using WavesAI Systems.

PRACTICE EXERCISE

Create a 5-video content series for a fictional personal trainer. Generate scripts, produce at least one video with HeyGen, and write optimised captions and hashtags for each platform.

Lesson 6: BUILD PROJECT: Customer Service AI Agent

Your First Agent Build

This is the hands-on project you have been building towards. By the end of this lesson, you will have a fully working Customer Service AI Agent that you can deploy on any website, demo to potential clients, or use in your own business.

What You Are Building

A chatbot that: answers FAQs about a business, provides product/service information, captures lead details (name, email, phone), handles basic complaints, escalates complex issues to a human, and works 24/7 without breaks.

Build Steps

Step 1: DEFINE THE BUSINESS: Choose a business type (restaurant, dental practice, estate agent, gym). Write down: business name, services offered, pricing, opening hours, location, unique selling points.

Step 2: CREATE THE KNOWLEDGE BASE: Using Claude, generate a comprehensive FAQ document with 20+ questions and answers. Include: services, pricing, booking process, cancellation policy, location/parking, special offers.

Step 3: WRITE THE SYSTEM PROMPT: Define the agent's personality, rules, and boundaries. Example: "You are Alex, the customer service assistant for [Business]. You are friendly, helpful, and professional. Always greet customers warmly. Answer questions using only the provided knowledge base. If you don't know the answer, say: I'd be happy to connect you with our team for more details. Always try to capture the customer's name and email."

Step 4: BUILD THE CONVERSATION FLOW: Map out the main paths: Greeting > Identify need > Answer/Assist > Capture details > Close. Include fallbacks for unexpected questions.

Step 5: SET UP THE AGENT: Use Claude Projects or a chatbot builder. Configure the system prompt, upload the knowledge base, set conversation rules.

Step 6: TEST WITH 20 SCENARIOS: Test common questions, edge cases, complaints, off-topic questions, and attempts to trick the bot. Refine the system prompt based on results.

Step 7: PREPARE THE DEMO: Create a script for showing the agent to potential clients. Practice the demo until it feels natural.

Testing Scenarios

- "What are your opening hours?"
- "How much does [service] cost?"
- "I want to book an appointment for next Tuesday"
- "I had a bad experience last time"
- "Can I speak to a real person?"
- "What's the weather like?" (off-topic test)
- "Do you offer discounts?"
- "I need to cancel my booking"

Pro Tip: Record a screen recording of yourself chatting with the agent. This becomes a powerful portfolio piece. Show potential clients: "Here is an AI agent I built. It handles customer questions 24/7 and captures leads automatically."

PRACTICE EXERCISE

Complete the full build. Test it with at least 20 different questions. Take a screenshot of the best conversation and save it. Write a one-paragraph description of what the agent does - this goes in your portfolio.

Lesson 7: Module 3 Quiz & Video Project

Module 3 Review Questions

- 1. What is Vapi and what can you build with it?
- 2. How do you clone a voice with ElevenLabs?
- 3. What is the difference between HeyGen and D-ID?
- 4. Name 5 types of video content you can create for clients.
- 5. What are the ideal dimensions and length for TikTok, Reels, and Shorts?
- 6. How much can you charge for a voice agent setup?
- 7. What should an AI agent do when it cannot answer a question?

Portfolio Project

Create a "Video & Voice Sample Pack" containing:

- A 60-second welcome video created with HeyGen
- A 30-second voiceover ad created with ElevenLabs
- A screenshot of your Customer Service AI Agent in action
- A voice agent system prompt template
- A pricing sheet for your voice and video services

Pro Tip: This portfolio demonstrates three high-value services. When pitching to a client, show them the video, play the voiceover, and demo the chatbot. Three services, one meeting, one client.

Module Summary

Key Takeaways:

- **Introduction to AI Voice & Video Technology:** Voice and video AI are the fastest-growing segments - businesses pay premium prices for these services.
- **Building AI Voice Agents with Vapi:** A single voice agent setup can earn you 1,000-3,000 GBP and takes 2-4 hours once you know the process.
- **Creating Professional Voiceovers with ElevenLabs:** ElevenLabs voiceovers are indistinguishable from human recordings and cost a fraction of the price.
- **AI Video Avatars: HeyGen & D-ID:** AI avatars let you produce unlimited video content - the bottleneck is no longer production, it is ideas.
- **Short-Form Content Factory:** Short-form video is the highest-ROI content format right now - AI lets you produce it at scale.
- **BUILD PROJECT: Customer Service AI Agent:** You now have a working AI agent you can demo to clients and sell for 500-2,000 GBP.
- **Module 3 Quiz & Video Project:** You can now offer voice agent setup, voiceover, and video production services to clients.

"Success is not final, failure is not fatal: it is the courage to continue that counts."

-- Winston Churchill

Congratulations on completing Module 3! Review the key concepts, complete the practice exercises, and move on to Module 4.
