

MODULE 4

No-Code AI Automation

Connect AI to real business workflows - eliminate manual tasks and build systems that run themselves.

"Discipline is the bridge between goals and accomplishment."

-- Jim Rohn

LESSONS IN THIS MODULE:

1. Introduction to AI Automation
2. Make.com & Zapier for AI Workflows
3. Building AI Chatbots & Assistants
4. Email Marketing Automation with AI
5. Social Media Automation
6. Client Onboarding Automation
7. Module 4 Quiz & Automation Build

WavesAI Academy | Master AI Agents & Automation

Learning Objectives

By the end of Module 4, you will be able to:

- Understand what business process automation means
- Identify which tasks can and should be automated
- Build your first automation in Make.com
- Connect AI (Claude/ChatGPT) to automated workflows
- Create conversational AI chatbots for websites
- Integrate chatbots with business systems
- Build AI-powered email sequences that nurture leads automatically
- Create personalised email campaigns at scale
- Automate content creation and posting across platforms
- Build a social media management system for clients
- Build an automated client onboarding system
- Create a professional first impression that runs on autopilot
- Review automation concepts
- Build a complete automation project for your portfolio

Lesson 1: Introduction to AI Automation

What is Business Process Automation?

Automation means making things happen without human intervention. When a customer fills in a form and automatically gets a confirmation email, their details are added to a CRM, and a task is created for the sales team - that is automation. AI adds intelligence to automation: it can read emails, classify support tickets, write personalised responses, and make decisions based on data.

Common Business Tasks You Can Automate

- Lead capture and follow-up (form submission > email sequence > CRM entry)
- Customer support ticket routing and initial response
- Social media post scheduling and content creation
- Invoice creation and payment reminders
- Meeting scheduling and calendar management
- Data entry from emails, forms, or documents
- Report generation from spreadsheet data
- Client onboarding (welcome email, contract, intake form, calendar link)

The Tools of Automation

Make.com (formerly Integromat)

Visual automation builder. Connect apps with drag-and-drop. Free tier available. Our primary tool in this module.

Zapier

The most popular automation platform. Simpler than Make but less flexible. Good for basic automations.

n8n

Open-source automation tool. More technical but completely free to self-host. Good for advanced users.

WavesAI Systems

All-in-one platform with built-in automation. Workflows, email sequences, and CRM triggers without needing separate tools.

Pro Tip: Start with Make.com for client projects - it has the best balance of power and ease of use. Use WavesAI Systems when clients need an all-in-one solution.

PRACTICE EXERCISE

List 10 repetitive tasks you do in a typical week. For each one, write whether it could be fully automated, partially automated, or requires human judgement. You will build automations for the top 3 later in this module.

Lesson 2: Make.com & Zapier for AI Workflows

Your First Make.com Automation

We will build a practical automation that businesses actually pay for: when someone fills in a contact form, the system automatically sends a personalised AI-written response email, adds them to the CRM, and notifies the business owner.

Step-by-Step Build

Step 1: Sign up at make.com and create a new Scenario.

Step 2: Add a Trigger: Choose "Webhook" or a form tool like Typeform/Google Forms. This fires when someone submits a form.

Step 3: Add an AI Module: Connect to Claude or ChatGPT API. Set the prompt: "Write a personalised thank you email to {{name}} who enquired about {{service}}. Be warm, professional, and include next steps. Keep it under 100 words."

Step 4: Add an Email Module: Connect Gmail or SMTP. Send the AI-generated email to the enquirer.

Step 5: Add a CRM Module: Connect to WavesAI Systems, HubSpot, or Google Sheets. Save the lead details.

Step 6: Add a Notification: Send a Slack message or email to the business owner with the new lead details.

Step 7: Test the entire flow end to end.

Popular Automations to Sell

- Lead Response Automation (500-1,500 GBP): Form > AI email > CRM > Notification
- Social Media Automation (300-800 GBP/month): AI content > Scheduling > Multi-platform posting
- Review Management (300-500 GBP): New review > AI response draft > Notification to approve
- Invoice Automation (500-1,000 GBP): Project complete > Generate invoice > Send > Follow up
- Onboarding Automation (800-2,000 GBP): New client > Welcome email > Contract > Intake form > Calendar booking

Pro Tip: Always document your automations with a simple flowchart. Clients love seeing a visual map of what happens automatically. It also helps you maintain the system later.

PRACTICE EXERCISE

Build the Lead Response Automation described above in Make.com. Use a Google Form as the trigger, Claude for the AI response, and Google Sheets as a simple CRM. Test it by submitting the form yourself.

Lesson 3: Building AI Chatbots & Assistants

Beyond Simple Chatbots

In Module 3, you built a Customer Service AI Agent. Now we take it further by connecting it to real business systems. An integrated chatbot does not just answer questions - it books appointments, processes orders, checks inventory, and feeds data directly into the business CRM.

Chatbot Integration Points

- Website embed: Add to any website with a simple code snippet
- WhatsApp Business: Respond to WhatsApp messages automatically
- Facebook Messenger: Handle enquiries from Facebook page
- Calendar integration: Check availability and book appointments in real-time
- CRM integration: Save every conversation and lead to the CRM automatically
- Payment integration: Accept payments or deposits through the chat

Chatbot Conversation Design

A great chatbot feels like talking to a helpful human, not a frustrating menu system. Here are the design principles:

- Start with a warm greeting and offer to help
- Use quick-reply buttons for common options (saves typing)
- Keep responses short (2-3 sentences max)
- Always provide a way to reach a human
- Capture lead information naturally within the conversation
- End conversations with a clear next step

Pro Tip: WavesAI Systems includes a built-in chat widget. For clients already on the platform, this is the fastest way to deploy a chatbot with CRM integration included.

PRACTICE EXERCISE

Design a chatbot conversation flow for a beauty salon. Map out 5 common paths: booking an appointment, asking about services, checking prices, making a complaint, and asking about availability. Write the exact messages for each path.

Lesson 4: Email Marketing Automation with AI

Why Email Automation Matters

Email marketing delivers an average return of 42 GBP for every 1 GBP spent. But most businesses send generic emails to their entire list. AI changes this - every email can be personalised based on the recipient's behaviour, interests, and stage in the customer journey.

The 7-Email Welcome Sequence

Every business needs a welcome sequence for new subscribers. Here is the proven structure:

- Email 1 (Day 0): Welcome + deliver the promised lead magnet + introduce yourself
- Email 2 (Day 1): Share your best piece of content or biggest insight
- Email 3 (Day 3): Tell a customer success story
- Email 4 (Day 5): Address the #1 objection to buying
- Email 5 (Day 7): Share social proof (testimonials, case studies, numbers)
- Email 6 (Day 9): Make a soft offer with a clear benefit statement
- Email 7 (Day 11): Final offer with urgency (limited time, bonus, scarcity)

Use Claude to write all 7 emails. Give it the business context, target audience, and product details. It can generate the entire sequence in 15 minutes.

AI-Powered Personalisation

Connect your email tool to Claude via Make.com to create truly personalised emails. For example: when a lead visits your pricing page but does not buy, automatically send an email addressing common price objections. When someone downloads a specific lead magnet, send follow-up content related to that exact topic.

Pro Tip: Set up email automation in WavesAI Systems for clients. It includes email marketing, CRM, and automation in one platform - no need to connect multiple tools.

PRACTICE EXERCISE

Write a complete 7-email welcome sequence for a fitness coaching business using Claude. Include subject lines, body copy, and CTAs for each email. Set up the sequence in an email tool (Mailchimp free tier or WavesAI Systems).

Lesson 5: Social Media Automation

The Social Media Automation Stack

Manual social media management is one of the biggest time sinks for businesses. With AI, you can create a month of content in an afternoon and schedule it to post automatically. Here is the stack:

- Claude AI: Generate content ideas, write captions, create hashtag sets
- WavesAI Studio: Create images, graphics, and short videos
- WavesAI Systems or Buffer: Schedule and publish across platforms
- Make.com: Automate the entire pipeline from idea to published post

Monthly Content Workflow

Step 1: Week 1 Day 1: Use Claude to generate 30 content ideas for the month. Prompt: "Create 30 social media post ideas for a [business type]. Mix educational (40%), entertaining (30%), promotional (20%), and engagement (10%) content."

Step 2: Week 1 Day 2: Write all 30 captions with Claude. Batch them by platform (LinkedIn = professional, Instagram = visual, Twitter = punchy).

Step 3: Week 1 Day 3: Create visuals using WavesAI Studio. Generate images for each post.

Step 4: Week 1 Day 4: Schedule everything in WavesAI Systems or Buffer. Set optimal posting times for each platform.

Step 5: Ongoing: Monitor engagement, respond to comments (AI can draft responses), and adjust strategy monthly.

Pricing Social Media Management

- Basic (12 posts/month, 1 platform): 300-500 GBP/month
- Standard (20 posts/month, 2-3 platforms): 500-1,000 GBP/month
- Premium (30+ posts/month, all platforms + engagement): 1,000-2,000 GBP/month

Pro Tip: Create a sample month of content for your own AI services business first. Post it consistently. This serves as both practice and marketing for your services.

PRACTICE EXERCISE

Create a complete 1-week content calendar (7 posts) for a fictional boutique hotel. Include: platform, caption, image description, hashtags, and posting time for each post. Generate at

least 3 of the images using WavesAI Studio.

Lesson 6: Client Onboarding Automation

Why Onboarding Automation Matters

The first 48 hours after a client signs up determine the tone of the entire relationship. A smooth, professional onboarding builds trust and reduces refund requests. An automated onboarding does this consistently for every single client without you lifting a finger.

The Automated Onboarding Sequence

Step 1: Trigger: Client accepts proposal or makes payment.

Step 2: Immediate (0 min): Welcome email with next steps, meeting booking link, and what to expect.

Step 3: Hour 1: Send intake questionnaire (Google Form or Typeform) to gather business details.

Step 4: Hour 2: Grant access to relevant tools (WavesAI Systems, shared drives, etc.).

Step 5: Day 1: Send a personalised video welcome (created with HeyGen using their business name).

Step 6: Day 2: Follow up if intake form not completed. Reminder email.

Step 7: Day 3: Schedule kickoff call if not already booked. Send calendar link.

Step 8: Day 7: Check-in email. "How are you finding everything? Any questions?"

Build this entire sequence in Make.com connected to your email tool and CRM. Once set up, it runs for every new client automatically.

Pro Tip: The personalised welcome video (Step 5) is what separates you from competitors. Use HeyGen to create a template video, then swap in the client's name for each new client. Takes 5 minutes and makes a huge impression.

PRACTICE EXERCISE

Map out your ideal client onboarding sequence for your AI services business. Write the content for each automated email. Build at least the first 3 steps in Make.com.

Lesson 7: Module 4 Quiz & Automation Build

Module 4 Review Questions

- 1. What is the difference between Make.com, Zapier, and n8n?
- 2. Name 5 business processes you can automate with AI.
- 3. What is a webhook and how does it trigger an automation?
- 4. Describe the 7-email welcome sequence structure.
- 5. How would you price a social media management package?
- 6. What are the key elements of automated client onboarding?
- 7. How does WavesAI Systems simplify automation compared to using separate tools?

Portfolio Project

Build a complete "Business Automation Package" containing:

- Lead capture automation (form > AI email > CRM)
- A 7-email welcome sequence written by AI
- A 1-week social media content calendar with AI-generated posts
- A client onboarding flow diagram
- A pricing sheet for your automation services

Document everything with screenshots and descriptions. This becomes your "proof of capability" when pitching automation services to clients.

Module Summary

Key Takeaways:

- **Introduction to AI Automation:** The most profitable AI service is not creating content - it is eliminating manual work that costs businesses hours every day.
- **Make.com & Zapier for AI Workflows:** A single well-built automation can save a business 10+ hours per week.
- **Building AI Chatbots & Assistants:** A website chatbot that captures leads and answers questions is one of the easiest sells to business owners.
- **Email Marketing Automation with AI:** AI email automation is the highest-ROI marketing channel - 42x return on investment on average.
- **Social Media Automation:** Social media management as a service is worth 500-2,000 GBP/month per client when powered by AI automation.
- **Client Onboarding Automation:** Automated onboarding saves you 2-3 hours per new client and creates a premium client experience.
- **Module 4 Quiz & Automation Build:** Automation is the foundation of scalable AI services - build once, deliver to many clients.

"Discipline is the bridge between goals and accomplishment."

-- Jim Rohn

Congratulations on completing Module 4! Review the key concepts, complete the practice exercises, and move on to Module 5.
