

MODULE 5

AI SEO & Marketing

Drive free traffic from Google and ChatGPT with AI-powered content that ranks and converts.

"The only way to do great work is to love what you do. If you have not found it yet, keep looking."

-- Steve Jobs

LESSONS IN THIS MODULE:

1. Introduction to AI-Powered SEO
2. AI Keyword Research & Content Strategy
3. Writing SEO Content That Ranks
4. AI Content Publishing Automation
5. AI-Powered Ad Campaigns
6. Module 5 Quiz & SEO Project

WavesAI Academy | Master AI Agents & Automation

Learning Objectives

By the end of Module 5, you will be able to:

- Understand how AI is changing search (Google + ChatGPT)
- Learn the fundamentals of SEO in the AI era
- Find profitable keywords using AI
- Create a content strategy that drives consistent traffic
- Write AI-assisted articles that rank on page 1 of Google
- Optimise content for both Google and AI search engines
- Set up automated daily content publishing
- Build a hands-free SEO system for clients
- Use AI to create high-converting ad copy and targeting
- Understand the basics of paid advertising with AI assistance
- Review SEO and marketing concepts
- Create a complete SEO strategy document as a portfolio piece

Lesson 1: Introduction to AI-Powered SEO

SEO Has Changed Forever

Search engine optimisation used to be about keywords and backlinks. In 2025, two massive shifts have happened: 1) Google now uses AI to understand content quality and user intent better than ever, and 2) Millions of people now search using ChatGPT, Perplexity, and Claude instead of Google. Your content needs to rank in both traditional search AND AI-powered search.

What AI SEO Means for Your Clients

Businesses that publish high-quality content consistently dominate search. AI makes this possible at scale. You can now help clients publish daily content that ranks on Google AND gets cited by AI search engines - all automated.

The AI SEO Stack

- Claude AI: Keyword research, content strategy, article writing
- WavesAI Systems: SEO tools, content publishing, analytics
- WordPress/Shopify: Client websites where content gets published
- Google Search Console: Track rankings and search performance
- Make.com: Automate the research-to-publish pipeline

Key SEO Concepts

Keywords

The words and phrases people type into search engines. Finding the right keywords means understanding what your target audience is searching for.

Search Intent

Why someone is searching. Are they looking for information, wanting to buy, or comparing options? Your content must match the intent.

On-Page SEO

Optimising individual pages: title tags, meta descriptions, headings, internal links, image alt text. These tell Google what your page is about.

E-E-A-T

Experience, Expertise, Authoritativeness, Trustworthiness. Google's quality framework. AI content must demonstrate real expertise to rank well.

Pro Tip: AI-generated content ranks well when it provides genuine value, includes specific examples, and is published on a site with topical authority. Generic AI content does not rank.

PRACTICE EXERCISE

Pick an industry you are interested in (e.g., dental, fitness, real estate). Use Claude to research: "What are the top 20 questions people ask about [industry] on Google?" These become your first content topics.

Lesson 2: AI Keyword Research & Content Strategy

Finding Keywords That Bring Buyers

Not all keywords are equal. "What is SEO" gets millions of searches but those people are just learning. "SEO services for dentists near me" gets fewer searches but those people are ready to buy. Your job is to find the buyer-intent keywords.

AI Keyword Research Method

Step 1: Use Claude: "Act as an SEO expert. Generate 50 keyword ideas for a [type of business] in [location]. Organise them by intent: informational (people learning), navigational (people looking for a specific business), commercial (people comparing options), and transactional (people ready to buy)."

Step 2: Prioritise transactional and commercial keywords first - these bring paying customers.

Step 3: Group related keywords into content clusters (one main topic with supporting subtopics).

Step 4: Create a publishing calendar: 2-3 articles per week targeting different keyword clusters.

Step 5: Track rankings monthly using Google Search Console.

Content Strategy Framework

For each client, create a 3-pillar content strategy:

- Pillar 1: Service pages (target transactional keywords: "AI chatbot for restaurants")
- Pillar 2: Blog articles (target informational keywords: "how AI can help restaurants save time")
- Pillar 3: Local content (target local keywords: "best AI services in [city]")

Pro Tip: Offer SEO as a monthly retainer service. Once the system is set up, AI does most of the work. You manage the strategy and publish content. This is 300-1,000 GBP/month recurring revenue per client.

PRACTICE EXERCISE

Create a complete keyword research document for a fictional plumbing business. Find 30 keywords across all 4 intent types. Group them into 5 content clusters. Create a 4-week publishing calendar.

Lesson 3: Writing SEO Content That Ranks

The AI SEO Article Template

Here is the prompt template that consistently produces ranking content:

"Write a comprehensive 1,500-word article about [keyword]. Use these guidelines: Include the keyword naturally in the title, first paragraph, and 2-3 subheadings. Write in a conversational, expert tone. Include specific examples, statistics, and actionable advice. Add an FAQ section with 5 common questions. Use short paragraphs (2-3 sentences). Include internal link suggestions. Make it genuinely helpful - not just keyword-stuffed content."

On-Page SEO Checklist

- Title tag: Include primary keyword, under 60 characters
- Meta description: Compelling summary, include keyword, under 160 characters
- H1: One per page, includes primary keyword
- H2/H3: Use for structure, include related keywords naturally
- First 100 words: Include the primary keyword
- Images: Use descriptive alt text with keywords
- Internal links: Link to 2-3 related pages on the same site
- External links: Link to 1-2 authoritative sources
- URL: Short, descriptive, includes keyword

Optimising for AI Search

To get cited by ChatGPT and Perplexity, your content needs to:

- Provide clear, definitive answers to specific questions
- Use structured data (FAQ schema, how-to schema)
- Include original insights and data, not just rehashed information
- Be published on a domain with topical authority
- Be regularly updated with current information

Pro Tip: After publishing each article, ask Claude to review it: "Review this article for SEO. Score it out of 100 and suggest 3 specific improvements." This quality check takes 2 minutes and significantly improves ranking potential.

PRACTICE EXERCISE

Write a complete SEO article targeting the keyword "how to use AI for small business."

Follow the template and checklist above. Then use Claude to review and score it. Make the suggested improvements.

Lesson 4: AI Content Publishing Automation

The Automated SEO Engine

Imagine a system that automatically researches keywords, writes optimised articles, generates images, and publishes to a client's website every single day. This is what you will build in this lesson. It is one of the most valuable services you can offer.

Building the Pipeline

- Step 1: Keyword Queue:** Create a spreadsheet of 90 target keywords (3 months of daily content).
- Step 2: Make.com Scenario:** Build an automation that picks the next keyword from the queue each day.
- Step 3: AI Writing:** Connect to Claude API to generate a complete article from the keyword.
- Step 4: AI Images:** Generate a relevant featured image using WavesAI Studio or Leonardo AI.
- Step 5: WordPress Publishing:** Use the WordPress API to publish the article directly to the client's site.
- Step 6: Internal Linking:** Automatically add links to related articles already on the site.
- Step 7: Notification:** Send a daily summary to the client showing what was published.

Pricing the AI SEO Service

- Setup fee: 500-1,000 GBP (keyword research, system configuration)
- Monthly retainer: 300-1,000 GBP (daily publishing, monitoring, optimisation)
- This means 3,600-12,000 GBP per year per client in recurring revenue

Pro Tip: Position this service as an "AI SEO Engine" rather than just "blog writing." Clients understand the value of an engine that runs automatically and grows their traffic over time.

PRACTICE EXERCISE

Create a keyword queue of 30 topics for a fictional accounting firm. Set up a basic Make.com scenario that takes a keyword, generates an article with Claude, and saves it to a Google Doc. This is the foundation of your automated publishing system.

Lesson 5: AI-Powered Ad Campaigns

AI + Paid Ads = Faster Results

While SEO builds long-term traffic, paid ads deliver immediate results. AI supercharges advertising by generating dozens of ad variations, writing landing page copy, and analysing performance data to optimise campaigns.

AI Ad Copy Generation

Use this prompt to generate ad variations:

"Write 10 Facebook ad variations for [product/service]. Target audience: [demographics]. Pain point: [main problem]. Desired outcome: [what they want]. For each ad include: headline (under 40 characters), primary text (under 125 characters), description (under 30 characters), and call to action button text."

The AI Ad Testing Framework

- Generate 10-20 ad variations using Claude
- Create 3-5 different images using WavesAI Studio
- Set up A/B tests running multiple variations simultaneously
- Let ads run for 3-5 days to gather data
- Ask Claude to analyse the results: "Here are the performance metrics for 10 ad variations. Which ones are performing best and why? What patterns do you see? Suggest 5 new variations based on the winners."
- Kill low performers, scale winners, generate new variations

Pro Tip: AI-generated ad images using WavesAI Studio often outperform professional photos because they can be created and tested rapidly. Generate 20 variations and let the data decide which works best.

PRACTICE EXERCISE

Create a complete Facebook ad campaign for a fictional online yoga course. Generate 10 headline variations, 5 primary text options, and 3 image descriptions. Identify which 3 combinations you would test first and explain why.

Lesson 6: Module 5 Quiz & SEO Project

Module 5 Review Questions

- 1. What is E-E-A-T and why does it matter for AI content?
- 2. Explain the difference between informational and transactional keywords.
- 3. What are the key elements of on-page SEO?
- 4. How do you optimise content for AI search engines like ChatGPT?
- 5. Describe the automated SEO publishing pipeline.
- 6. How would you price an AI SEO service?
- 7. What is the AI ad testing framework?

Portfolio Project

Create a complete "AI SEO Strategy" document for a fictional business:

- Keyword research with 30 keywords across 4 intent types
- 3-pillar content strategy
- 4-week publishing calendar
- 1 complete SEO article (1,500+ words, fully optimised)
- Automated publishing system diagram
- Pricing proposal for monthly SEO services

Module Summary

Key Takeaways:

- **Introduction to AI-Powered SEO:** AI SEO is not just about Google anymore - optimising for AI search engines like ChatGPT and Perplexity is equally important.
- **AI Keyword Research & Content Strategy:** The right keywords + consistent AI content = predictable, growing organic traffic.
- **Writing SEO Content That Ranks:** AI-written content that follows SEO best practices can rank on page 1 within weeks.
- **AI Content Publishing Automation:** An automated publishing system is the ultimate recurring revenue service - set up once, charge monthly forever.
- **AI-Powered Ad Campaigns:** AI reduces ad creation time by 90% and improves conversion rates through rapid testing.
- **Module 5 Quiz & SEO Project:** AI SEO is one of the most scalable recurring revenue services you can offer.

"The only way to do great work is to love what you do. If you have not found it yet, keep looking."

-- Steve Jobs

Congratulations on completing Module 5! Review the key concepts, complete the practice exercises, and move on to Module 6.
